

Optical Thin Films Coating Engineer Job Summary

About PFG

PFG Precision Optics, Inc. is a manufacturer and coater of ultra-high precision lenses and prisms, which are installed in various types of equipment. Industries in which these optics are used include military, test & measurement, semiconductor, imaging, medical and telecommunications.

Job Summary

We are seeking an Optical Thin Films Coating Engineer. This may be a more senior level individual with coating experience, or someone at a more junior level new to the field. The ideal candidate should have a stable foundation in optical coatings but also want to broaden their capabilities in terms of spectrum and technology. Alternative, we are willing to train the right candidate for the position, but it is imperative that you demonstrate the ability to excel and troubleshoot issues through your past experiences. It is expected that you will be able to independently design coatings to meet print specifications, or if you are new to the field, you should be able to do so within a reasonable amount of time after joining our team.

Our facility is well-maintained, includes a Class 1000 clean room environment and state of the art equipment. We offer great benefits for our employees including a competitive salary, medical and dental insurance, Simple IRA contributions with employer match, and paid vacations and holidays.

Essential Skills and Requirements

- Bachelor's Degree in Electrical Engineering, Optical Engineering or Physics.
- At least 5 years of Optical Coating experience preferred.
- Methodical and detail-oriented
- Organized
- Effective communicator (written and oral)
- Ability to multi-task
- Production-minded
- Strong work ethic

"Perfection is Forever our Goal"
